

## Adjunctive Oral Abnormalities Screening Form

*Complete each time the exam is offered and place in the patient's file*

Our practice continually strives to provide important enhancements in oral healthcare for our patients. We are concerned about oral abnormalities and their relationship with serious diseases such as oral cancer. For this reason, we offer screenings to every patient for early detection.

Oral cancer is one of the deadliest diseases we encounter, and research shows that the late detection of oral cancer is the primary reason that mortality rates are high.<sup>1</sup> As is the case with most other cancers, age is a primary risk factor for oral cancer. Tobacco use and chronic alcohol consumption are also major risk factors.

We find that using ViziLite PRO — along with a visual examination — improves our ability to identify suspicious areas that may have been missed during the conventional examination. Early detection of abnormalities can minimize or eliminate the harmful and potentially disfiguring effects of serious oral diseases such as cancer, and possibly save your life. A painless exam gives us a better chance of finding any oral abnormalities you may have at an early stage. In our practice, the exam will be offered to you annually.

Dental insurance may or may not cover the exam. However, our office is happy to verify your coverage for you. We will also provide you with a medical insurance form that you may use to file this procedure with your medical insurance provider. The fee for this exam is \$ \_\_\_\_\_.

- Yes. I authorize the my dental professional to perform the ViziLite PRO screening along with the standard oral examination. I accept financial responsibility for this exam.
- No. I would prefer not to have an oral abnormality screening exam at this time.

Print name: \_\_\_\_\_
